

WebSphere MQ Best Practices

Smarter
Process

WebSphere MQ Best Practices

Who is this guy ??????????????????????

- ❖ Bobbee Broderick (1970)
- ❖ Experience
 - ❖ Wall St Consultant 25+ years (z, CICS, DB2) (MQ, MQSI)
 - ❖ MQ/MQSI/WMB since 1998
- ❖ IBM – ISSW 8 years
 - ❖ Healthchecks
 - ❖ Crit Sits
 - ❖ Architecture, programming, etc
- ❖ Tech Lead for ISSW for MQ and MQFTE (MFT)
Also for MQAMS/ WMB
- ❖ Star of “*The Good Shepherd*”
- ❖ BB Photography
www.bb-photography.org
- ❖ Email – rkbroder@us.ibm.com

WebSphere MQ Industry Practices

WebSphere MQ Best Practices

MQSeries Ten Commandments

1. Thou **shalt** not use a queue as a database.
2. Thou **shalt** backup your pagesets, filesystems, and logs.
3. Thou **shalt** routinely apply maintenance to your WebSphere MQ systems.
4. Thou **shalt** use MQCLOSE and MQDISC when terminating an application.
5. Thou **shalt** not use MQGET with WAIT UNLIMITED without specifying MQGMO_FAIL_IF QUIESCING.
6. Thou **shalt** secure all client-channel connections to a queue manager.
7. Thou **shalt** create standard naming conventions.
8. Thou **shalt** provide systems management tools for administrators and users.
9. Thou **shalt** not create a WebSphere MQ network without mapping out all connections and object relations on paper first.
10. Thou **shalt** not attempt to apply asynchronous methods to all problems simply because WebSphere MQ is a wonderful product.

WebSphere MQ Best Practices

MQSeries Ten Commandments - *Amendments*

- Thou **shalt** apply security to queue objects.
- Thou **shalt** have JMS applications capture and log the `LinkedException` for all `JMSExceptions`.
- Thou **shalt** have Unit Of Work (UOW) use the minimum amount of resources (short in duration).
- Thou **shalt** not use `MQOPEN`, `MQGET` or `MQPUT` without specifying `MQ*O_FAIL_IF QUIESCING` (where `MQ*O` is `MQOO` or `MQGMO` or `MQPMO`).
- Thou **shalt** have triggered applications completely drain a queue before exiting.
- Thou **shalt** have applications transfer unknown or invalid messages to an application back-out queue.
- Thou **shalt** have client applications automatically reconnect to a queue manager after any type of failure.

WebSphere MQ Best Practices

Best Practices?

What are they

- ❖ Building Blocks for a effective system
- ❖ Proven
- ❖ Reliable
- ❖ Value
- ❖ Proprietary
- ❖ Cost Effective
- ❖ IBM Accepted

WebSphere MQ Best Practices

Areas of Concern

- ❖ Business Requirements
- ❖ Sizing
- ❖ Naming Standards
- ❖ Logging
- ❖ Application Design Standards
- ❖ High Availability
- ❖ Disaster Recovery
- ❖ Monitoring
- ❖ Roles
- ❖ Skill Development
- ❖ Process Approach
- ❖ Security
- ❖ Clustering
- ❖ Release Management

WebSphere MQ Best Practices

Business & Project Requirements

- Define the requirements
- Document interfaces & Stakeholders
- Collect Interface Objects
- Document the interchange specifications
- Define the mappings
- Define the SLA requirements
- Testing
 - Environments
 - Requirements
- Implementation requirements

WebSphere MQ Best Practices

Sizing - Server

- WebSphere MQ requires:
 - Memory
 - CPU
 - Fast Disk
 - Network
- IBM Techline
 - Server Estimates
 - Memory, CPU, DISK
 - Workload Based

WebSphere MQ Best Practices

Sizing - Queue Manager

- Queue Manager Sizing (Distributed)
 - Log File directory space
 - Log File Type
 - Log File Size - <http://tiny.cc/MQsizing>
 - **Log File Placement**
 - Data Directory Size
 - Queue Buffers
 - Queue Max Size
- Z/OS
 - Bufferpools
 - Logs
 - PageSets

WebSphere MQ Best Practices

Naming Standards

- Define a naming standard that works
- More important, define a naming standard
- Select simple names, KISS it
- Avoid object identifiers
- Avoid location identifiers
- Define cluster naming standards
- Use Alias names for local Cluster Queue access
- Keep QMGR Names short
- SDLC identifier (i.e. MQDAPP01)
- Adhere to standards
- Support Pack

WebSphere MQ Best Practices

Logging

- ❖ Reality
- ❖ Log Types – Circular vs Linear
- ❖ Log Sizing is important, for distributed, download and use the log file size estimator @ <http://tiny.cc/MQsizing>
- ❖ running out of log space is bad.
- ❖ Keep logs on spindles separate from other file systems
- ❖ z/OS, alternate DASD
- ❖ z/OS keep dual logs separate
- ❖ DEV and SIT use Circular
- ❖ UAT, PROD and DR use linear
- ❖ Move archived logs off file system
- ❖ Delete after successful restart
- ❖ Usually 14 days on weekly restarts

WebSphere MQ Best Practices

Application Design Standards

- Create Application programming standards
- Should work with Naming Standards
- Create patterns and detail QMGR interactions
 - Request/Reply
 - Triggering
 - Error Processing
 - Reconnection
 - Poison messages
 - Audit / Logging
- Language Specific Interactions
- Create program specification templates
- Create Test Script Templates
- Perform Code Reviews prior to implementation
- Security
- Wrappers

WebSphere MQ Best Practices

Application Coding

- Avoid the excessive use of MQCONN and MQDISC
- Trigger on first, read till 2033
- Smaller messages are preferred
- Batching of messages provides performance
- Provide reconnection logic, CCDT or JNDI
- Values
 - Avoid Hard Coding values, **parameterize**
- Use Persistent messages were needed, not ALWAYS
- Avoid large LUW
- Separate Request Response processing where possible
- Capture Errors
- When finished, Close and disconnect. Even during unexpected termination
- Use MQ for Checkpoint Restart
- Use Properties or Enterprise Headers

WebSphere MQ Best Practices

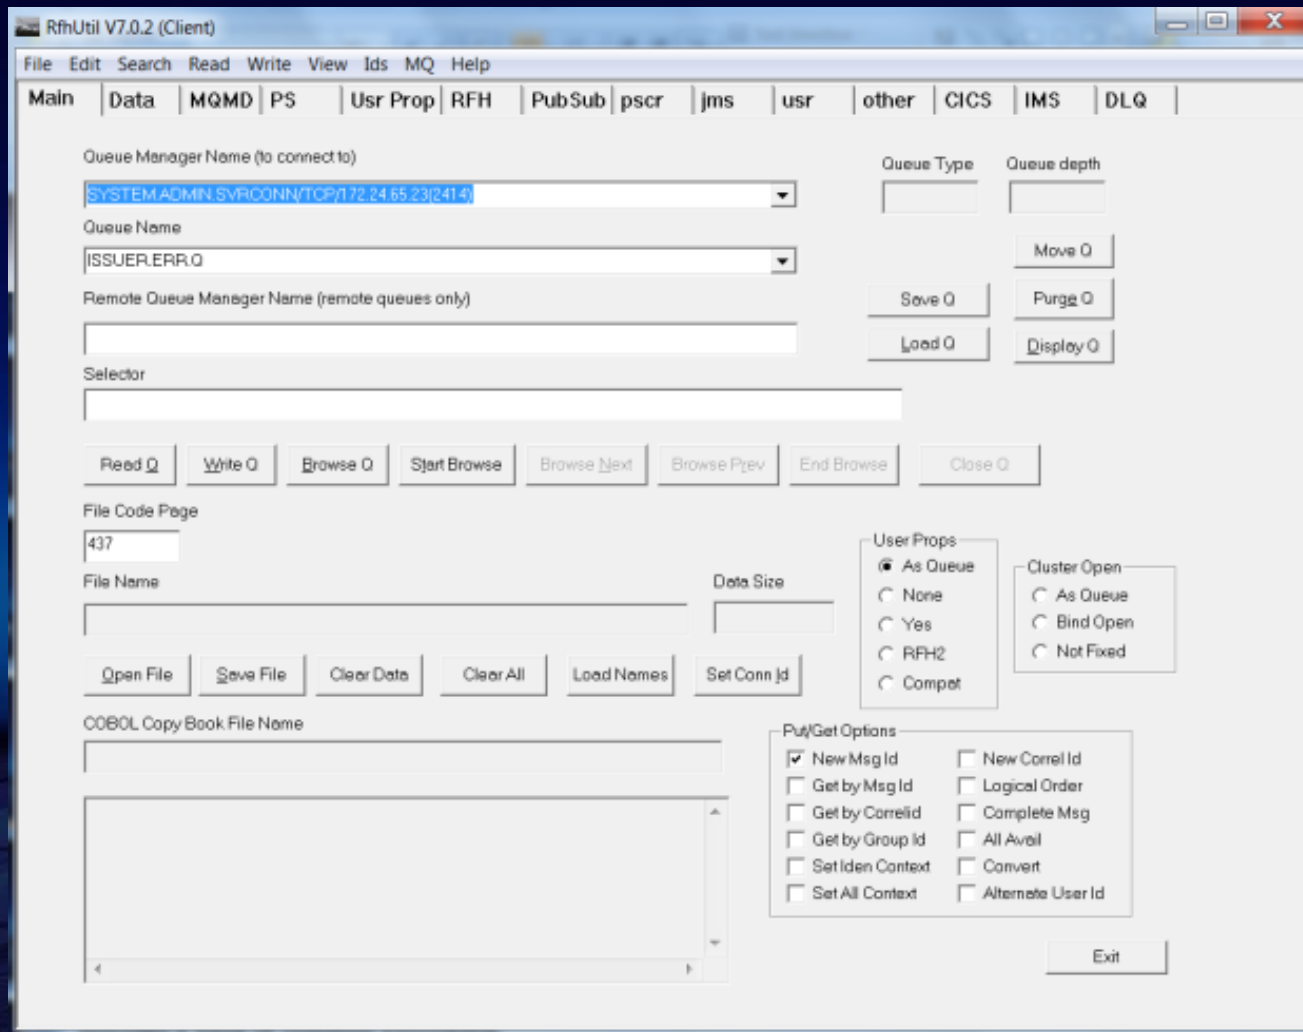

Tools

- What tools do you need
- Do you standardize or give free hand
- Do you buy or borrow?
- What Tools do your application programmers use
- What tools do your administrators use
- What tools do your Business users use
- What tools do your support team use
- Support Packs
- MQ out-of-the-box

WebSphere MQ Best Practices

Tools - RFHUTIL

WebSphere MQ Best Practices

Tools - MQExplorer

The screenshot displays the IBM WebSphere MQ Explorer interface. The left pane shows a tree view of the Queue Manager hierarchy under 'IBM WebSphere MQ'. The right pane shows a list of Queues with columns for Queue name and Queue type. The Administration Log pane is also visible at the bottom.

Queue Manager Hierarchy:

- Queue Manager Clusters
 - JMS Administered Objects
 - Managed File Transfer
 - Service Definition Repositories
 - Administered Servers
- Brokers
 - BRKDEV01 on 'WMQDEV01 (10.106.65.21)(2414)'
 - BRKDEV02 on 'WMQDEV02 (10.106.65.22)(2414)'
 - BRKUAT01 on 'WMQUAT01 (10.106.69.21)(2414)'
 - BRKUAT02 on 'WMBUAT02 (10.106.69.22)(2414)'
 - MB8BROKER
 - MB8BROKER1 on 'MB8QMGR1 (172.24.65.23)(2414)'
 - MB8BROKER2 on 'MB8QMGR2 (172.24.65.24)(2414)'
- Broker Archive Files
 - Localhost

Queues List:

Queue name	Queue type
BOBBEE	Local
SYSTEM.ADMIN.ACCOUNTING.QUEUE	Local
SYSTEM.ADMIN.ACTIVITY.QUEUE	Local
SYSTEM.ADMIN.CHANNEL.EVENT	Local
SYSTEM.ADMIN.COMMAND.EVENT	Local
SYSTEM.ADMIN.COMMAND.QUEUE	Local
SYSTEM.ADMIN.CONFIG.EVENT	Local
SYSTEM.ADMIN.LOGGER.EVENT	Local
SYSTEM.ADMIN.PERFM.EVENT	Local
SYSTEM.ADMIN.PUBSUB.EVENT	Local
SYSTEM.ADMIN.QMGR.EVENT	Local
SYSTEM.ADMIN.STATISTICS.QUEUE	Local
SYSTEM.ADMIN.TRACE.ACTIVITY.QUEUE	Local
SYSTEM.ADMIN.TRACE.ROUTE.QUEUE	Local

Administration Log:

Mess...	Source	Timestamp	Messa
---------	--------	-----------	-------

WebSphere MQ Best Practices

Testing

- **SDLC Cycles**

- **Development – Developer testing, initial test script creation**
- **System Integration Testing – Integration testing with endpoint. Shakeout of integration specifications. Increased testing script**
- **Quality Assurance/User Acceptance Test – Formal Process, Independent group, Secure, isolated, Production ‘like’**

- **Types**

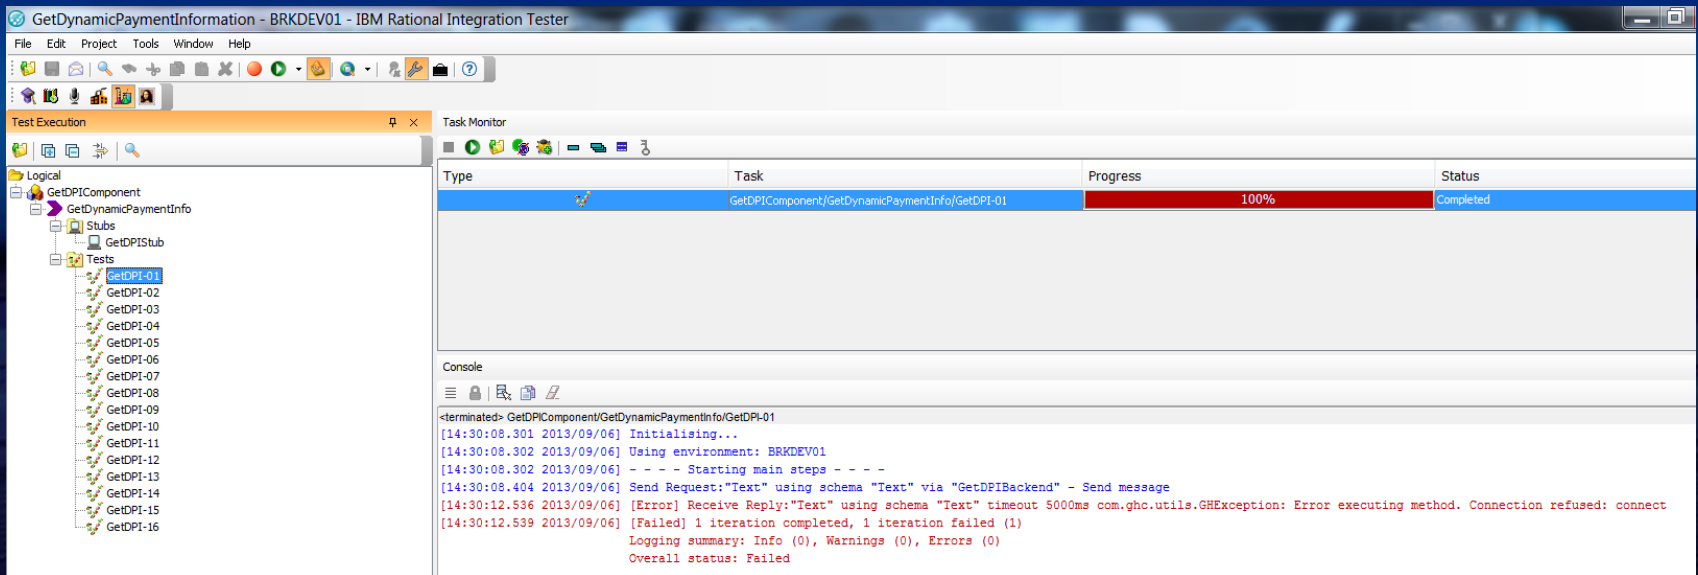

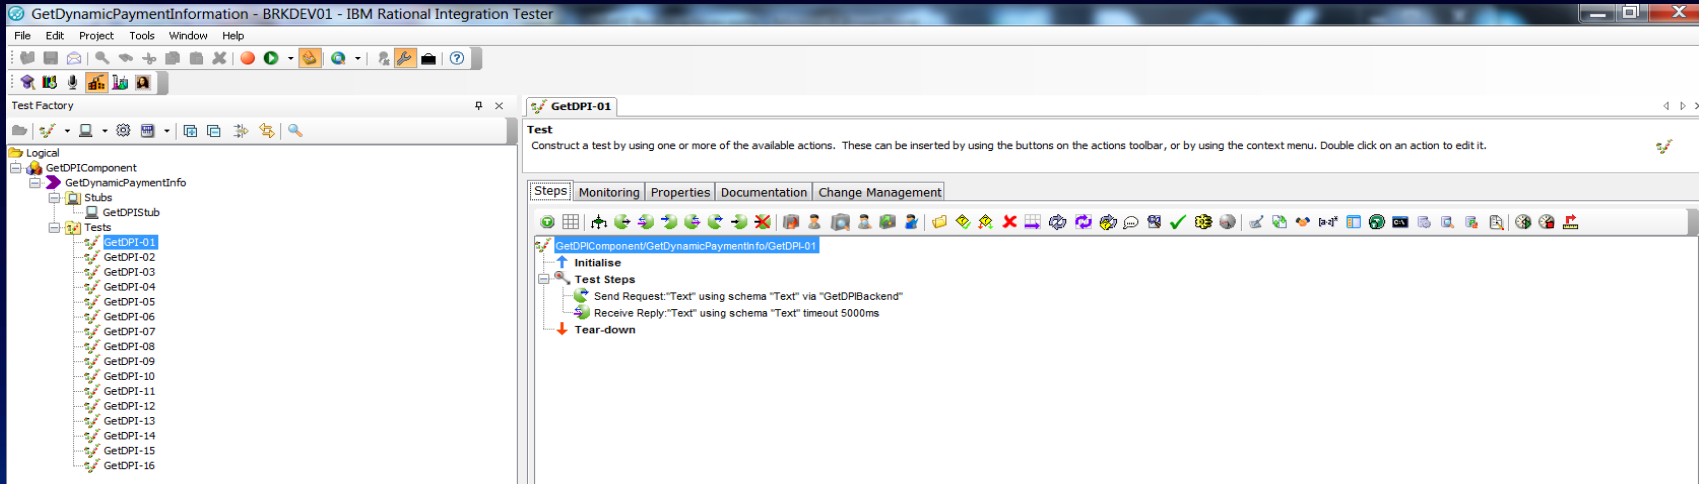

- **Load testing**
- **Performance**
- **Break**
- **Sustained**
- **Manual**
- **Automated**

- **Tools**

WebSphere MQ Best Practices

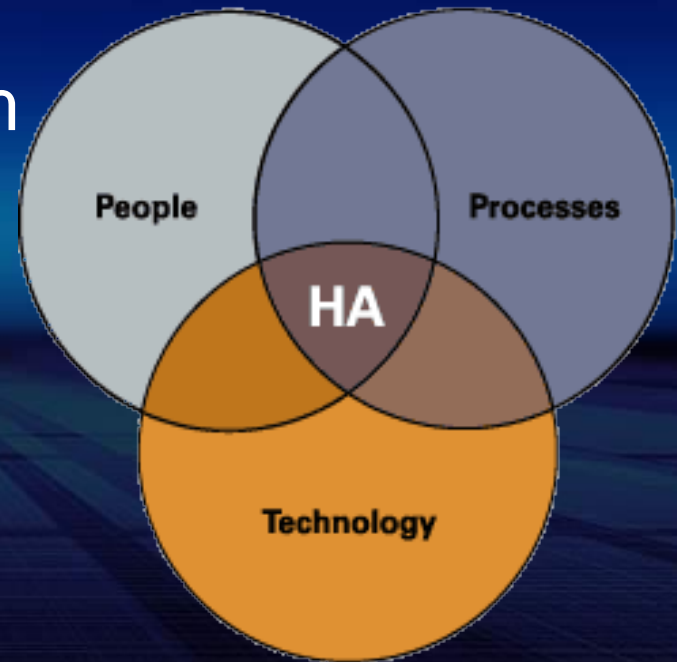

Testing – Rational Integration Tester

WebSphere MQ Best Practices

High Availability

- What does High Availability mean to you and your business?
- Different people, different requirements.
- What is the driving force for the availability of a system
- Levels - Silver, Gold, Platinum
- What is my approach?
- How do I implement it.
- What am I really getting.
- Active/Passive
- Active/Active

WebSphere MQ Best Practices

Disaster Recovery

- End of the world approach
- COB or Real Time
- SLA's again as determining factor
- Placement of datacenter is key.
- A lot of activity after 9/11 and power grid loss
- File systems are replicated to a secondary datacenter
- Primary activity can be sync or async
- Secondary can be passive or active
- Moving data ?
- Dark sites? Resource reduction

WebSphere MQ Best Practices

Monitoring

- DO NOT WAIT TILL THE LAST MINUTE.
- Pick you Monitoring Approach.
 - simple or complex
 - Feature rich or basic
- Decide the key factors that provide enterprise wide capabilities
- Centralize your Monitoring Console
- Know what to monitor
- MQ Monitoring - <http://tiny.cc/MQMonitoring>

WebSphere MQ Best Practices

Role Definition

- Who are the actors
- What groups control what
- Who do you turn to
- Clear definition
- Multiple Hats
- Training

WebSphere MQ Best Practices

Skill Development

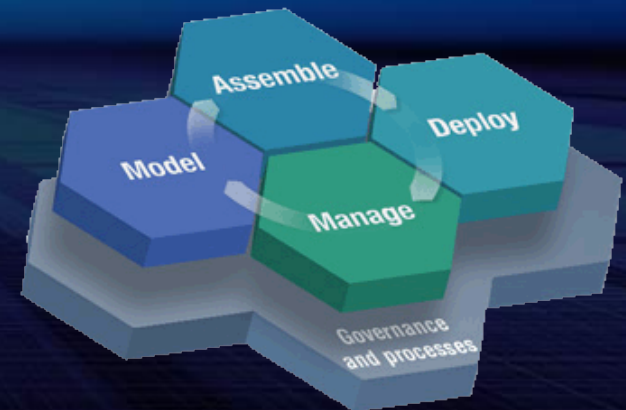

- Skilled employees are an asset not a liability
- Training is important for the health of the system
- Changing technologies require training
- In-house, remote, Self Paced
- IBM offers training in all features and components of their software
- External sites are available for training
- Hire vs Train
- Certification Testing

WebSphere MQ Best Practices

The SOA Process Approach

- Simplify
- Accelerate
- Secure
- Govern

WebSphere MQ Best Practices

Security

- What should be done
 - When you start thinking about security, you need to decide exactly what it is you want to achieve, determine what your objectives are.
 - Ensure each user is uniquely identified
 - Prove that a user is who they say they are
 - Limit Access to authorized users only
 - Track who does what to what and when
 - Protect your sensitive data from unauthorized viewing
 - Check unauthorized changes have not been made to data
 - Ensure a message really is associated with whom it claims
- How
 - SSL
 - MQAMS
 - CHLAUTH, SETMQAUT, AUTHREC

WebSphere MQ Best Practices

Clustering – Why do we use it

- ✓ Simplified administration
 - ✓ Large WMQ networks require many object definitions
 - ✓ Channels
 - ✓ Transmit queues
 - ✓ Remote queues
- ✓ Workload balancing
 - ✓ Spread the load
 - ✓ Route around failures
- ✓ Flexible connectivity
 - ✓ Overlapping clusters
 - ✓ Gateway Queue managers
- ✓ Pub/sub Clusters

WebSphere MQ Best Practices

Clustering

- Don't have too many cooks
 - Treat a single cluster as a single point of administration
 - Have well defined policies for the gateway queue managers
- Treat all overlapping clusters as a single Namespace
 - Channel names, and therefore queue manager names, should be unique throughout.

WebSphere MQ Best Practices

Clustering – Full Repositories

- FRs should be highly available
 - Avoid single point of failure - have at least 2
 - **Recommended to have exactly 2 unless you find a very good reason to have more**
 - Put them on highly available machines
- FRs must be fully inter-connected
 - Using manually defined cluster sender channels
- If at least one FR is not available or not fully connected
 - Cluster definition changes via FRs will not flow
 - User messages between Partial Repositories over existing channels will flow
- Should applications run on full repositories?
 - Best Practice hat on: No
- What if I need to take them down for maintenance?
 - Use the fact that you have two!

WebSphere MQ Best Practices

Clustering – Full Repositories

- FRs should be highly available
 - Avoid single point of failure - have at least 2
 - **Recommended to have exactly 2 unless you find a very good reason to have more**
 - Put them on highly available machines
- FRs must be fully inter-connected
 - Using manually defined cluster sender channels
- If at least one FR is not available or not fully connected
 - Cluster definition changes via FRs will not flow
 - User messages between Partial Repositories over existing channels will flow
- Should applications run on full repositories?
 - Best Practice hat on: No
- What if I need to take them down for maintenance?
 - Use the fact that you have two!

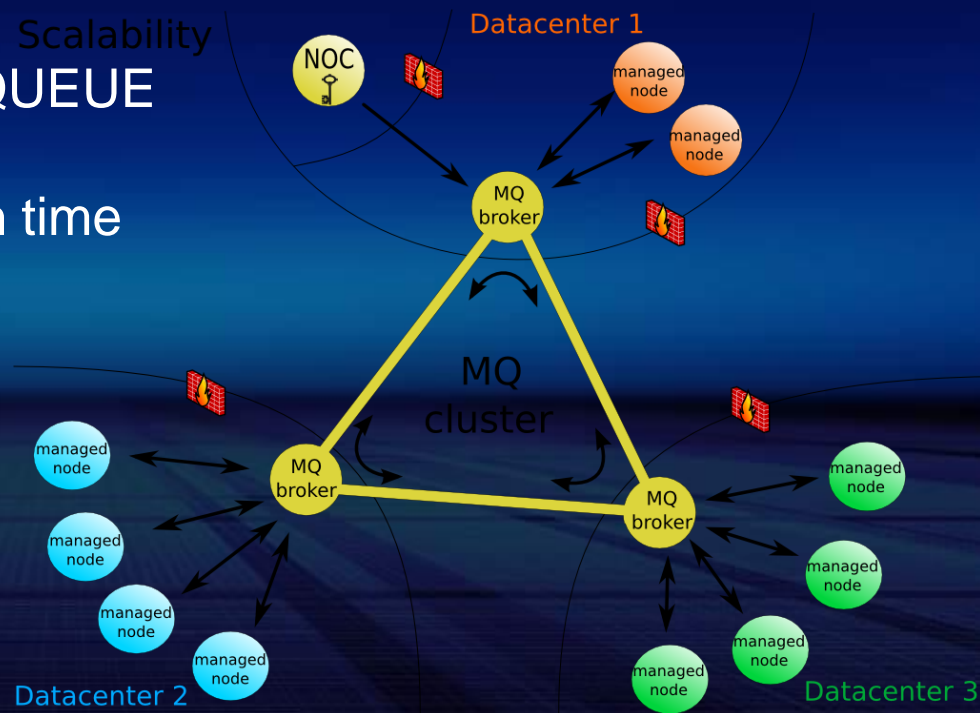

WebSphere MQ Best Practices

Clustering – Cluster History

Refresh Cluster and the History Queue

- REFRESH CLUSTER considered harmful?
 - Sledgehammer approach
 - Review processes first and see if step missed
- SYSTEM.CLUSTER.HISTORY.QUEUE
 - Version 7.0.1
 - Snapshot captured at refresh time
 - Serviceability enhancement

WebSphere MQ Best Practices

Release Management

- MQ releases Fix Packs frequently
- MQ releases interim fixes between Fix Packs
- Fix Pack are cumulative
- Organizations typically lack planning
- Upgrades are not planned and troublesome
- System Outages
- Plan for upgrades
- Proactive vs Reactive

WebSphere MQ Best Practices

Thank you for your attention

Any questions?
